

Daily Report

Date: May 6, 2025

Submitted by: Etsubdink Yewale

Overview:

Focused on implementing and refining critical components of the user authentication flow, specifically the "Check Inbox" page and the foundational structure for the "Reset Password" feature. Additionally, efforts were made to improve the overall project maintainability and user experience through global styling enhancements.

Key Activities:

- **"Check Inbox" Page Implementation:**

Designed and developed the UI for the `CheckInboxPage`, guiding users to check their email for a password reset link. Initially, the Poppins font was imported locally within this component.

- **Global Font Styling Optimization:**

Refactored the Poppins font import from the `CheckInboxPage` to the global `src/index.css` file. This not only ensured consistent typography across the entire application but also resolved prior linter warnings related to scoped style tags.

- **Layout and Component Refinement:**

Improved the layout and visual hierarchy of the `CheckInboxPage`. As part of this refinement, a newly developed `InputDesign` component was introduced and integrated to enhance design consistency and user input presentation.
